

Internship Task 1

Submitted by:

Umama Zaheer

Submitted to:

Abdullah

Course:

Web Development

Date: 10 July 2026

Activity Overview

In this internship task, I learned the basics of Git and GitHub — how Git tracks changes to code over time and how GitHub hosts projects online for sharing. I created a GitHub repository named awd-2026-Umama-Zaheer and built a simple personal portfolio website using HTML, CSS, and JavaScript with a modern glassmorphism design, including sections on my education, career goals, hobbies, and dreams.

I made my first commit (index.html and style.css) using Git CLI commands such as git init, git add, git commit, and git push. I made my second commit (script.js and README.md) using GitHub Desktop, a visual tool that lets you stage, commit, and push changes through buttons instead of typing commands.

Through this activity, I understood that the same version control tasks can be done either through the command line or through a graphical user interface (GUI) application, and I also learned the purpose of a README file in explaining a project to anyone who views the repository.

What I Learned

- Difference between Git and GitHub
- What a repository, commit, and push mean in version control
- Using Git CLI commands: git init, git add, git commit, git branch, git remote, git push
- Using GitHub Desktop as a visual alternative to the command line
- Building a simple website using HTML, CSS, and JavaScript
- Writing a README.md file to document a project
